

10th WVA GLOBAL ONE HEALTH SUMMIT **“Coordinated & sustainable actions to contain AMR”**

This event convenes global leaders from different sectors and disciplines to contribute to developing a shared global vision, narrative and targets to tackle antimicrobial resistance and mobilize all relevant stakeholders. The animal health sector must play its part. Veterinary medical use of antimicrobials is necessary to respond to animal diseases, protect animal health, and improve animal welfare. However, non-veterinary medical use, including growth promotion or routine use, remains a serious concern globally. This Summit aims to stimulate intersectoral and interdisciplinary dialogue to clear the way for sustainable antimicrobial stewardship practices across human, animal, and environmental health domains.

The 10th WVA Summit is a great opportunity, working in collaboration with the Antimicrobial Resistance Multi-Stakeholder Partnership Platform, to help the 2024 UNGA High-level Meeting on AMR to achieve the most robust possible consensus and the most substantial possible commitments in our shared journey towards a healthier and more resilient future.

Wednesday, 17th April 2024
Cape Town, South Africa
International Convention Centre

PROGRAM

WVA One Health Summit			
17 th April 2024 – Auditorium 2			
Chair: Dr Shannon Mesenhowski
